

## Reference use of the iPad

Below is a list of links to articles written in the last 2-3 weeks that reference iPad's use in the classroom. There may be a couple of non-education-specific articles, which I've included to illustrate the "real world" applicability of the platform (something colleges and universities should be taking note of as they release students out into the work force).

As a gentle reminder, these articles were not written by Apple, nor are they "endorsed" by Apple, but they might help you answer what other folks are doing with their iPads.
